

# Cranial nerves

These are **paired** structures emerging from the **brainstem**, with the exception of **I. and II. cranial nerve**.

I. Nervus olfactorius - at the base of the skull, it passes through the lamina cribrosa of the ossea ethmoidalis.

II. Nervus opticus - at the base of the skull passes through the canalis opticus together with the ophthalmic artery.

III. Nervus oculomotorius - at the base of the skull passes through the fissura orbitalis superior.

IV. Nervus trochlearis - at the base of the skull passes through the fissura orbitalis superior.

V. Nervus trigeminus

- V/1 Nervus ophtalmicus - passes through the fissura orbitalis superior at the base of the skull.
- V/2 Nervus maxillaris - at the base of the skull passes through the foramen rotundum into the pterygopalatina fossa.
- V/3 Nervus mandibularis - passes through the foramen ovale at the base of the skull.

VI. Nervus abducens - passes through the fissura orbitalis superior at the base of the skull.

VII. Nervus facialis - at the base of the skull passes through the meatus acusticus internus, then the foramen stylomastoideum.

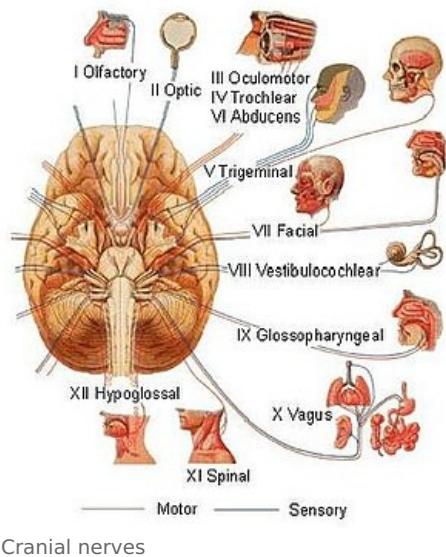

VIII. Nervus vestibulocochlearis - does not extend from the base of the skull, it remains in the meatus acusticus internus.

IX. Nervus glossopharyngeus - passes through the jugular foramen at the base of the skull.

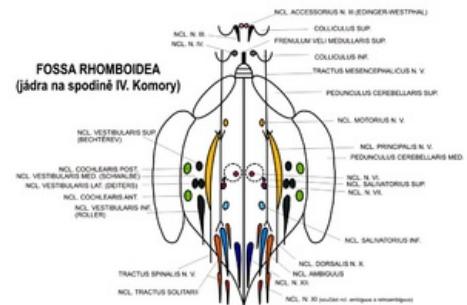

X. Nervus vagus - at the base of the skull passes through the jugular foramen.

XI. Nervus accessorius - passes through the jugular foramen at the base of the skull.

XII. Nervus hypoglossus - passes through the canalis hypoglossi at the base of the skull.
