

Professional vasoneurosis

Professional vasoneurosis occurs during long-term work with vibrating machines (pneumatic hammers, jackhammers, grinders, chainsaws).

due to hypertrophy of the medial muscle of the finger arteries, vasospasm occurs more easily at work (especially in cold + damp) ***whiteness of finger + painful paresthesias***

- exceptionally skin trophic changes
- sometimes it is combined with oppression in the region of the upper thoracic aperture / SKK
- muscles and bones can also be affected by vibrations
- difficulties will be alleviated with the termination of hazardous work
