Delirium, not induced by alcohol and other psychoactive substances (F05)

- **Definition**
 - a qualitative change in consciousness (lucidity, not in the vigilance)
- **Symptoms**
 - perceptual distortions: illusions, hallucinations, disorientation time and place
 - Reversal of sleep-wake cycle (**symptoms often worse at night**)
 - psychomotor and emotional disturbances
- **Treatment**
 - **mainly supportive measurements: quiet room, talking to family for reorientation, waiting it out...**
 - In acute agitation: Restriction of limbs to the bed, highly potent antipsychotics (haloperidol)

Causes

- extracerebral or cerebral: organic brain changes, **after operation** conditions, infections, dehydration, metabolic disturbances, injury, cancer, serious burns...
